Synthetic Data Analyst Resume

Fictional sample for CareerLens testing. No real personal information.

Summary

Entry-level analyst focused on cleaning structured datasets and communicating useful business findings.

Technical Skills

Python, SQL, Excel, Pandas, Power BI, Statistics, Data Visualization, Data Cleaning.

Education

Bachelor of Computer Applications, Sample Institute, 2026. Coursework in databases and applied statistics.

Academic Projects

Retail reporting: cleaned 12000 synthetic sales records using Python and Pandas. Queried customer segments in SQL and reconciled results against Excel totals. Built a Power BI dashboard with monthly trends, filters and clear chart labels. Documented data cleaning rules and reviewed the results with a project teammate.

Internships

Sample analytics lab: used statistics and data visualization to summarize category-level changes in a fictional retail dataset. Reviewed source totals before sharing the report.

Certifications

Completed an introductory spreadsheet analysis course in a fictional training program.
