Synthetic ML Engineer Resume

Fictional sample for CareerLens testing. No real personal information.

Professional Summary

Early-career machine learning practitioner building reproducible training and inference workflows.

Core Skills

Python, Machine Learning, scikit-learn, FastAPI, Docker, Pandas, SQL, Model Evaluation, Git, Unit Testing.

Education

Bachelor of Computer Science, Sample Institute, 2026. Coursework in algorithms, databases and probability.

Projects

Demand classifier: prepared 8000 synthetic records in Pandas and SQL. Built a scikit-learn preprocessing and machine learning pipeline, separated validation and test data, and documented model evaluation with a confusion matrix. Served predictions through FastAPI, packaged the service with Docker, and added unit testing for invalid API inputs.

Experience

Fictional engineering lab: used Python and Git to review preprocessing changes and reproduce model evaluation results. Wrote a setup guide and checked container startup with synthetic examples.

Certifications

Completed a fictional introductory course in reproducible model development.
